Release Notes

ATTENTION all previous version customers!

Version 10 is a paid upgrade and requires a new serial number if you are upgrading from versions 4-9 users will retain the same serial number when upgrading to version 10. Versions 1, 2, and 3 are not eligible for upgrade pricing.

If you install version 10 and attempt to complete a project without purchasing a new license or upgrade, your videos exported from ScreenFlow 10 will contain a watermark. Once you have entered a valid version 10 serial, projects that were created in demo mode can be re-exported to remove the watermark.

To obtain the upgrade pricing:

- Version 6+:
    - Install ScreenFlow 10 and use a buy link in the ScreenFlow menu or Preferences>License panel.
        - Your prior version serial number must be activated in the ScreenFlow Preferences> License panel of ScreenFlow 10 before initiating the upgrade process.
        - Unable to launch a prior version or having other upgrade issues? Use our Web Upgrade Tool.
- Version 4 and 5:
    - You **must** use our Web Upgrade Tool.
    - Alternatively, you can contact our sales team for assistance, though the Web Upgrade tool is strongly recommended for the quickest experience.

Mac App Store Customers:

Unfortunately, the Mac App Store does not allow for product upgrades. If you missed the launch day pricing, you have three options:

1. You can purchase ScreenFlow 10 from the Mac App Store at full price. This option would allow you to run ScreenFlow on as many devices as the Mac App Store allows.
2. You may use our Web Upgrade Tool to obtain upgrade pricing. This will require that you transfer your license to a Telestream license, upgrade to ScreenFlow 10, and run it on one device at a time per the Telestream EULA.
3. If you are running Mac App Store ScreenFlow and it is no longer operational due to OS compatibility updates, you can transfer your license to a Telestream license and you will be issued a complimentary serial number which has compatibility fixes to operate on macOS version 10.15 Catalina and 11 Big Sur.
   Differences between Telestream version and Mac App Store version

System Requirements:

- Apple Silicon or Intel-based[1] Mac with 64-bit processor – Core i3+ recommended
- Operating Systems
  - macOS 10.15 Catalina, & macOS 11 Big Sur
- Minimum 4 GB RAM
- 20 GB hard drive
- Apple macOS approved graphics card[2,3] required
- Cameras using the DV and/or HDV codec are not supported. Click here to learn more.

[1]ScreenFlow does not support "Hackintosh" systems

[2]ScreenFlow requires a GPU officially supported by Apple

[3]ScreenFlow does not support NVIDIA "Web Drivers"

Supported UVC capture devices:

The following UVC capture cards have been tested and are supported by ScreenFlow 9 and higher:
- Magewell USB Capture
- Epiphan AV.IO
- AJA U-Tap
- Elgato CamLink 4K

10.0 – Major New Features

What's New:

Animated Title Library-

- Select from a range of beautiful animated lower-third and title card graphics

Recording Multiple Audio/Video Sources-

- Multiple camera & microphone devices can now be recorded at the same time

Improved camera recording system-

- Significant reductions in file-size and CPU usage during recording & editing

Destructive Project Archive–

- Reclaim space by saving your documents with their unused edits removed

Redesigned Video Filters Interface-

- Built-in color effects library and support for importing CLUT (Color Lookup Tables)
- Automatic background Removal filter

New Computer Audio Recording System-

- Apps are now recorded independently, and can be extracted, disabled and remixed
- Lower latency, including new modes for DAW (Digital Audio Workstation) software

10.0 – Improvements & Fixes

Improvements:

- **IMPROVED –** New implementation of the timeline icon cache, significantly reducing memory and CPU usage
- **IMPROVED –** Added Clip Enable toggle, allowing the quick disabling of a clip during editing
- **IMPROVED –** Updated UI on macOS 11 Big Sur
- **IMPROVED –** Added new "Canvas" Preferences tab, including new snapping and display options
- **IMPROVED –** Redesigned the front end / recording interface, adding a wizard to help setup OS permissions
- **IMPROVED –** Added ability to publish chapter markers to YouTube
- **IMPROVED –** Updated YouTube tag validation
- **IMPROVED –** Added document presets for Instagram TV (IGTV) and Stories
- **IMPROVED –** Added light / dark user interface theme selector, independent of OS preference
- **IMPROVED –** Added context click menu to clips within the canvas
- **IMPROVED –** Modified Text panel font size selector to use a numerical entry field
- **IMPROVED –** Clip titles are now always visible in the timeline, regardless of the horizontal scrolling
- **IMPROVED –** Added a document volume adjustment slider

- **IMPROVED** – Added a warning if the mouse cursor will be "burnt in" the final screen recording, and therefore non-adjustable during editing
- **IMPROVED** – Improved performance of playback & export of screen recording content on Apple Silicon hardware
- **IMPROVED** - Documents are now faster to load in a variety of situations
- **IMPROVED** – Updated layout of main menu, rationalizing all clip functionality under a new 'Clip' menu
- **IMPROVED** – Added support for recording the screen from a Sidecar device
- **IMPROVED** - Reworked camera recording system to support a wider range of devices, including virtual camera apps (such as DSLR drivers)
- **IMPROVED** - Implemented recovery system: if a ScreenFlow recording is terminated expectedly, a prompt will be shown to save to a new location
- **IMPROVED** – Added mouse cursor smoothing feature, allowing jitter of the mouse pointer to be reduced when editing
- **IMPROVED** – Added prompts when importing movie files that could benefit from proxy usage to improve editing performance (long GOP content)
- **IMPROVED** – When using the JKL workflow to scan content quickly, audio will now correctly maintain its pitch during playback

Fixes:

- **FIXED** – ScreenFlow is more accurate when matching colors between text boxes, annotations and background content
- **FIXED** – Resolved stability issues that could occur when interrupting timeline playback
- **FIXED** – Improved relinking across external drives
- **FIXED** – Proxies will now respect content with alpha channels
- **FIXED** – Improved general stability with proxy workflows
- **FIXED** – Fixed issues with AAC & MP3 files getting truncated on import
- **FIXED** – Restored Imgur publishing support
- **FIXED** – Resolved a variety of issues that could render a document unable to be saved
- **FIXED** – Fixed issue preventing chroma key color being selected after a video action is added
- **FIXED** – Allow YouTube thumbnails to be selected multiple times
- **FIXED** – Resolved issue suppressing a number of results in the Stock Media Library
- **FIXED** – Resolved issue with Camo Studio creating very long recordings on Apple Silicon hardware
- **FIXED** – Corrected gap from microphone devices when resuming recording after a pause
- **FIXED** – Resolved visual jump on export from text sources when down-scaling from document size
- **FIXED** – Corrected alignment of multi-channel audio device UI
- **FIXED** – UI glitch when starting new narration before ending previous narration
- **FIXED** – Dither option for animated GIF is re-enabled
- **FIXED** – Marker window will not show markers in correct frame-rate

- **FIXED –** Resolved recording errors that could occur from using a screen in Airplay mode
- **FIXED –** Replace media could produce incorrect results when working with documents upgraded from legacy versions of ScreenFlow

Version 10.0 contains hundreds of bug fixes, not all of which can be listed here. There are also additional user interface/user experience enhancements, and improvements to the general stability and performance of the application, that are not able to be listed here.
