

PRISM

Precision Waveform Monitoring
to Meet the Challenges of
UHD Content Production

PRISM MPD

PRISM MPS

PRISM MPP

PRISM waveform monitors provide a practical and robust suite of standard applications while also empowering you with the flexibility to choose from an extensive array of supplementary software options. Create a custom solution finely tuned to meet engineering and monitoring challenges with unmatched precision and efficiency.

PRISM monitors stand out by readily accommodating diverse SDI, IP, and hybrid SDI/IP workflows across broadcast, mobile live production, sports, and post-production environments. These monitors offer flexibility and versatility that cater to your preferences and operational requirements with multiple display configurations and alignment with ST 2110 standards.

Advantages of PRISM:

- Supports hybrid SDI and IP workflows
- Handles video up to 8K, including UHD, HDR, and WCG
- Supports flexible implementation with integrated or external displays
- Offers shallow depth designs for tight spaces
- Provides low latency remote access via WebRTC
- Adapts to diverse use cases through an extensive library of software options.
